Final Project: Gamified AI-Assisted Pedagogical Module

AI Integration in Higher Education — AUF Workshop | Licence / Master level

■ The Task

Design and gamify a **university disciplinary course module** that integrates **multiple AI tools** and **diverse learning types** to strengthen student engagement, autonomy, and learning. The module must be realistic, pedagogically coherent, and directly transferable to a real classroom.

■ Project Objectives

1. **Analyze & Define —** Analyze your course and formulate **clear, measurable learning objectives** aligned with the module content.
2. **Design the Scenario —** Conceive a complete pedagogical scenario integrating **gamification mechanics** (levels, quests, progression, feedback, rewards) and multiple AI tools.
3. **Build the Module —** Develop a **functional prototype** using your chosen AI tools — ready for classroom use, covering varied learning types (knowledge, comprehension, application, creation…).
4. **Present & Iterate —** Present the project to peers, gather feedback, and refine accordingly.

■ Expected Deliverables

Learning Designer Export	A file exported from the Learning Designer tool, released under an open license **(CC-BY-NC recommended)**. The module must include **multiple AI tools** (at least 2–3 different tools) and **varied learning activity types** (e.g. acquisition, inquiry, practice, production, collaboration, discussion).
Explanatory Video	**A screen-recorded video** (5–10 min) in which you **explain what you designed**, walk us through the pedagogical choices you made, and **demonstrate how the module looks and works** (AI tools in action, gamification mechanics, student-facing activities).
Learning Designer Link	A **publicly accessible link** to your Learning Designer module — open and viewable by everyone.

■ **All links and videos must be publicly accessible (no login required).**

■ Evaluation Grid

Criterion	What we look for	Weight
Pedagogical Relevance	Objectives are clear, measurable, and address a genuine course need. Activities are logically structured.	**20%**
AI & Gamification Integration	Multiple AI tools are used purposefully (≥2–3 tools). Gamification mechanics (levels, quests, badges, feedback…) are meaningfully integrated and support the learning objectives.	**30%**
Learning Variety	The module covers diverse learning types: knowledge acquisition, practice/quiz, creation, collaboration, reflection, etc. Addresses different learner profiles.	**20%**
Scenario Quality	The pedagogical scenario is clear, progressive, and well-aligned. Activities build toward the stated outcomes.	**15%**
Feasibility & Presentation	The module is classroom-ready. The explanatory video clearly communicates the design choices and demonstrates the tools in use.	**15%**
